DC DIELECTRIC TEST SET

These systems are designed as modular, stackable assemblies consisting of two 60 kVDC, 5 mA sections providing stepless DC output voltage. The polarity may be changed by physically rotating the output modules. This test set design allows for additional modules to be added later for increased voltage testing capacity.

Phenix Vietnam Portable DC Hipot

Model: 4120-10

Phenix Technologies offers a line of DC Hipots that are lightweight, compact, and ruggedly built for use in the lab or field for accurate testing of electrical switchgear, cables, motors, generators, and protective equipment. Five models are available with outputs of 0-40 kV, 0-75 kV, 0-100 kV, 0-120 kV and 0-160 kV.

Each model includes many advanced features including high accuracy digital meters, analog charging current-meter, and adjustable overcurrent and increased output current-ratings.

Establishing a consistent maintenance testing program reduces failures and extends equipment life. The Portable DC Hipots are described in Phenix brochure # 40105 completely
